How to fix a computer

How to fix any computer

The Oatmeal

<http://theoatmeal.com>

Step 1. Reboot

Did that fix it?
No? Proceed to step 2.

Step 2.

Format hard drive.
Reinstall Windows.
Lose all your files. Quietly weep.

Step 1. Take it to an Apple store.

Did that fix it?
No? Proceed to step 2.

Step 2. Buy a new Mac.

Overdraw your account. Quietly weep.

Step 1.

Learn to code in C++. Recompile the kernel. Buy your own microprocessor out of spare silicon had lying around. Recompile the kernel again. Switch distros. Recompile the kernel again but this time use a CPU powered by refracted light from Saturn. Grow a giant beard. Blame Sun Microsystems. Turn your bedroom into a server closet and spend ten years falling asleep to the sound of whirring fans. Switch distros again. Abandon all hygiene. Write a regular expression that would make other programmers cry blood. Learn to program in Java. Recompile the kernel again (but this time while wearing your lucky socks).

Did that fix it?
No? Proceed to step 2.

Step 2.

Revert back to using Windows or a Mac.
Quietly weep.
